

## **Wildfire Risk Reduction Unit 11**

Machine treatment and hand treatment combo

### **Location/Ownership**

- 1.5 ha total, one treatment unit: implementation planned for Fall 2021-March 2022
- Within industrial area on 13<sup>th</sup> Ave/Mill Road, immediately adjacent to sewer treatment location
- Municipally owned land (Village of Nakusp)

The unit borders private property on the south, municipal property on the east, Mill Rd on the west, and crown provincial land to the north (occupied by BC Hydro)

### **Cutting Specifications**

- Reduce stand density to 500 to 800 stems per ha (3.6 m to 4.5 m average spacing)
- Remove coniferous stems < 12.5 cm diameter unless retention of smaller stems is necessary to achieve the targeted average spacing

Prioritize larger, healthy stems for retention in the following species order: Douglas-fir, Western red cedar, Western larch, Lodgepole pine, White pine
