

Wildfire Risk Reduction Unit 13

Machine treatment and hand treatment combo

Location/Ownership

- 2.2 ha total, one treatment unit: implementation planned for Fall 2021-March 2022
- South of Nakusp, immediately north of Nakusp Creek and between Highway 6 and Arrow Lake
- Crown ownership

The north boundary borders private property

Cutting Specifications

- Retain 700 – 1000 stems per hectare (3.2 – 3.8 m average spacing)
- Prioritize larger, healthy stems for retention in the following species order: Douglas-fir, Western larch, Western red cedar, Western hemlock

Cut all understory coniferous trees ≤ 12.5 cm diameter unless retention of smaller stems is necessary to achieve the targeted average spacing
