

### **Wildfire Risk Reduction Unit 3**

Conceptual, identified by BC Wildfire Service.

#### **Location/ Ownership**

- Adjacent to Unit 2, along Kuskanax Mountain and bordering the Nakusp Hot Springs Road in places. This unit is proposed and a prescription has not been developed yet.

Although the Unit 3 fire break was not initially identified in the CWPP, it was identified by BC Wildfire Service as an integral treatment area for the Nakusp community scale fuel break plan and RDCK wildfire mitigation project. Based on preliminary imagery and mapping, the initial treatment concept was to create a shaded fuel break along existing old logging trails located at the base of Kuskanax Mountain to connect recent harvesting in Unit 2 with the proposed treatment units on the south-east side of Kuskanax Creek. A treatment prescription has not been developed at this time.
